

WIPER BLADES

Wiper blades wipe away rain, snow, mist, insects, dust etc. to keep the windshield clean. Clean windows provide good front and rear visibility. Therefore, wiper blades are very important to ensure driving safety.

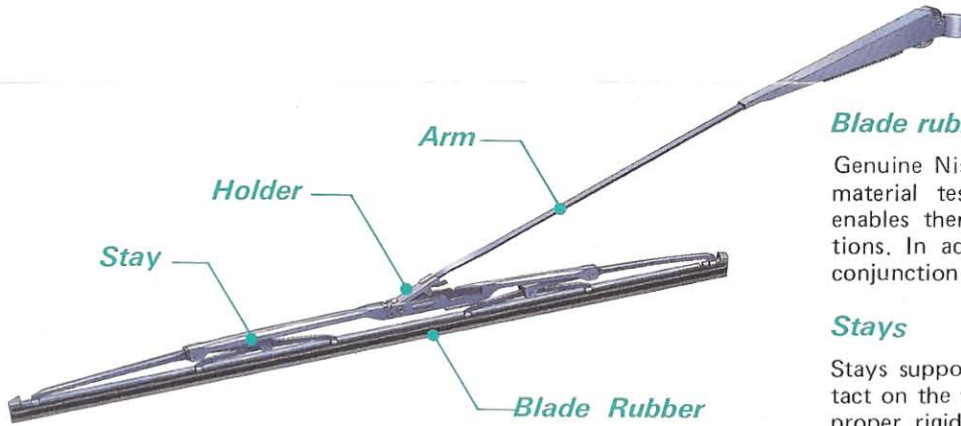

A wiper is really like a razor for shaving. That is, the most important part is the blade.

GENUINE NISSAN WIPER BLADES PROVIDE:

- Excellent clearing capability
- Smooth and stable movement
- High durability

Genuine Nissan wiper blades are the most suitable for your Nissan, because each one is designed to match a particular model's body shape. Moreover, they are produced to conform with rigid quality standards.

Blade rubber

Genuine Nissan rubber wiper blades employ a special material tested for durability and pliability, which enables them to adapt to all kinds of driving conditions. In addition, they are designed to function in conjunction with the arm pressure.

Stays

Stays support the blade rubber to maintain even contact on the windshield surface. Genuine stays have the proper rigidity and convey just the right amount of pressure uniformly distributed.

Arms

The arm moves the blade over the windshield. For ideal wiping action, optimal fit between the blade and arm is essential. Genuine Nissan wiper blades are designed to work in perfect harmony with the arm.

Holders

The genuine wiper blade holder securely connects the stays with the arm and allows the blades to move smoothly. Moreover, installation and detachment are simple, which makes replacement easy.

If You Use Inferior Wiper Blades

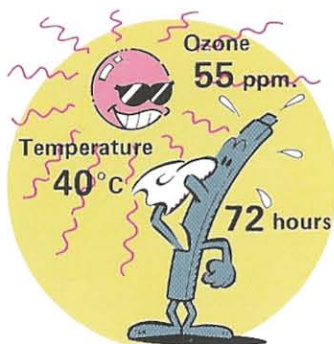

Inferior wiper blades are manufactured without consideration of your Nissan's body shape. Therefore, they might cause the following problems.

1. You might not have clear visibility because of inferior wiping. This will jeopardize your safety.
2. Poor quality blade rubber might damage the windshield surface. Replacing windshields is very expensive.
3. Easy wearing, cracking and deformation might force you to replace the wiper blades more often. This will also be a financial disadvantage.

Enjoy Comfortable Driving Using Genuine Nissan Wiper Blades !

Genuine Nissan wiper blades are designed to withstand the following rigorous tests:

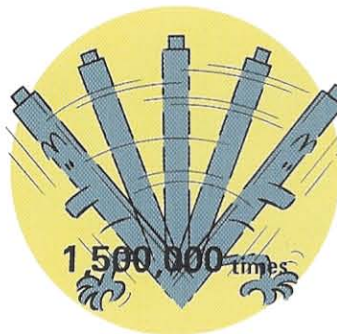

1. Rubber aging test

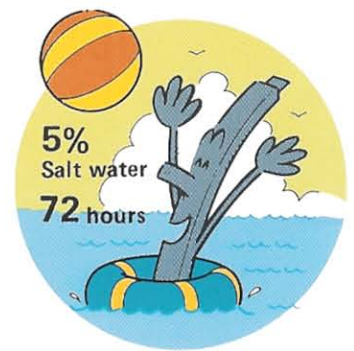

2. Strength test

3. Endurance test

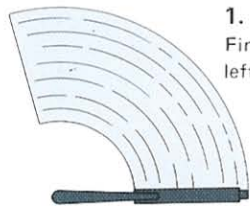

4. Corrosion test

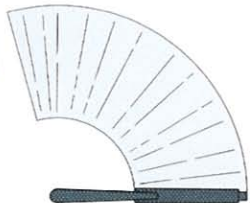

Indications That Wiper Blades Should Be Replaced

Replace your wiper blades when you experience the following problems:

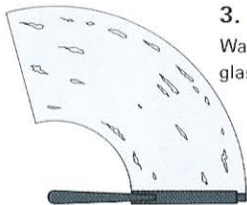

1. Beading

Fine drops and lines of moisture are left on the surface after wiping.

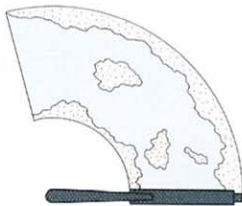

2. Squeaking

The blades are noisy and move with jerky motions instead of smoothly.

3. Blurring

Water or dirt film remains on the glass, causing blurring.

4. Slipping

The blades are lifted off the glass during high-speed driving due to wind pressure.

It is recommended your windshield always be clean for longer life of the wiper blades.
